

Wool is a minor natural wonder! As an animal fibre, it provides insulation against cold and heat, and is highly elastic, stretchable and flame-retardant. We have sheep to thank for conventional wool.

By its very nature, it is a living, breathable fibre that adapts ideally to human body movements and shapes. This natural product has a unique ability to protect the wearer against external influences: it keeps you warm on cold days, and feels pleasantly cool in the summer.

Products made from natural fibres are generally very resilient. Moisture has little effect on them, and you can often simply brush off any dirt.

|---|---|
| <p><b>Major soiling</b></p>   | <p>Regular brushing to remove items of dirt and the removal of surface soiling helps to avoid a dull appearance of this fabric. Use a damp sponge for delicate fabrics.</p>   |
|    | <p>Use a steam iron at a moderate temperature, up to a maximum of 150 °C. If necessary, protect the fabric, i.e. cover it with a damp cloth and then iron. Lift the iron and bring it down again, rather than moving it back and forth.</p>   |
|   | <p>Do not rub, do not wring out; wash at a maximum of 30 °C ideally by hand or else using the wool cycle with a wool detergent.<br/>Washing using a normal hand-wash/wool cycle at the specified temperature. Never use general-purpose detergents, colour detergents or fabric conditioners.<br/>Notice: Wool has a natural tendency to become entangled and shrink at high temperatures.</p>  |
|  | <p>As a rule, clothing should be dry-cleaned as infrequently as possible! Ideally, you should always remove dirt spots yourself. When they are dry-cleaned, items made of fine wool materials lose their fat layer.<br/>Thorough washing is suitable for delicate textiles or those with difficult-to-remove soiling. Basic dry-cleaning – a simplified, less expensive cleaning method – is recommended for dirt that is easy to remove. Washing in a laundrette, which is often self-service, only involves basic cleaning. This is not suitable for delicate clothing. If there are dirt spots, the client should specify the cause of them if possible so as to make it easier to remove them in a manner that is kind to the fabric.</p> |
|  | <p>For drying, spread out on a terry towel, lay out the item and allow to dry while spread out at room temperature, and never under the influence of strong heat. Never carry out drying in the immediate vicinity of a source of heat (radiator, radiant heater). Allow the product sufficient time to dry slowly.</p>   |
|  | <p>Spin wool products for a maximum of 60 seconds in a washing machine. Drying in a clothes dryer is not recommended.</p>   |
